DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Aihara et al. (US 6,236,840).

As to claim 1, Aihara teaches an apparatus comprising:

A power amplifier configured to produce an amplified transmit signal at a power level (figure 1, power amplifier (4)),

An antenna switch connected to an output terminal of the power amplifier and an antenna, the antenna switch configured to switch the antenna between a receive mode and a transmit mode (column 3, lines 54 to column 4, line 24, TDD switch (3) constituted by an FET or the like for switching connection between transmission and reception), and

A power amplifier detector connected to the antenna switch, the power amplifier detector configured to receive a leakage signal from the antenna switch and measure a power level of the leakage signal (figure 1, column 4, lines 25-39, transmit leakage detector (14) and column 4, lines 63-67, isolation of the TDD switch (3) is 20 dB such that the transmit signal is detected less 20dB plus gain of amplifier (7)).

Conclusion

The prior art made of record and not relied upon but considered pertinent to applicant's disclosure includes: Sheiman (US 2005/0118962) discloses a leaky transmit/receive switch may be used in a transceiver to permit the receiver to detect the transmit output power and adjust the transmitter for linearization or output power
